early bird, invitation,  
no limits, container**

The new Project Building, containing all departments, has 5500 m<sup>2</sup> of space for all the project teams, which work with central information systems. Due to the mobile, free-standing meta walls of the **mooia** series, the working areas of the project teams can be quickly adapted to changing requirements.

At these acoustically highly effective walls, there are fixed workstations of system developers and project managers while other project employees work at benches in the centre. For each floor of the building, the employees of the insurance company chose different image motifs.

**no limits, container**

Due to the acoustically effective **moovia** partition walls, which are printed on both sides, the employees are given maximum privacy in the large open-space areas on the floors. Zoning at the sides is achieved by means of storage furniture of **grand slam** series and privacy elements on the desktop surfaces of the **temptation C** workstations. Models of the **early bird** series are used as office swivel chairs in all parts of the building. Photos: © A. Stehle, Mainz

The graphic above shows an example of the floors in the building: individual workstations at the edges and team desks in the centre. Two differently configured meeting rooms supplement the available work spaces. Graphic: R+V

The free-standing **mooia acoustic base** elements provide acoustically effective zoning and privacy. In the advance planning phase, statistical calculations of the reverberation times were carried out in order to determine the optimum number and size of the elements. The photo motifs used were chosen by the employees in a democratic process from among graphic material, some of which were their own, some of which were bought in.

The textile panels were printed digitally and fixed in a frame made of high-quality aluminium. In the middle, there is a sound-absorbing core made of specially developed foam.

The 250 **mooia** elements used by R+V Versicherung are of different sizes, with some of them in plain colours. Floor beams ensure the necessary stability. Photos: © A. Stehle, Mainz

Large and small meeting rooms can be booked. In the larger rooms, there are conference tables of the **no limits** series – these can be configured without difficulty according to the requirements. **early bird** cantilever chairs are used for the seating.
